

GRICtraveler

# Internet Access WORLDWIDE FOR THE PRICE OF A LOCAL CALL

## What is it?

GRICtraveler™ is a global Internet access service that allows you to gain access to the Internet or your company's Intranet from almost anywhere in the world. GRICdial™ is the GRICtraveler dial up client software which has an integrated point of presence (POP) phonebook. This allows you to easily locate remote POPs offline, eliminating the need to obtain access numbers preceding a trip. You can download the dialer from this web site [www.gric.no](http://www.gric.no) and install onto your computer in a matter of minutes!

## Why should I use GRICtraveler?

Because it allows you to easily get access online from almost any location worldwide. It's simple to use and provides high security and great connection quality. You can also program your dialer to automatically launch your browser, VPN client, email or other applications frequently used. You'll also help the company save enormously on dial up costs since you are placing local calls vs. long distance or international calls.

## How do I use it?

When you travel and need to connect to the Internet, simply open the dialer, type in your location to locate local POPs and select "Dial" to place a call to one of these POPs. You use your regular user ID and password to gain access. Within seconds, you will be connected to the Internet for the price of a local call.

## What if can't connect?

GRIC has redundant POPs in most countries, so select another local number and dial. If you want to further investigate, you can click on the "Detail" button, call the local support number found in the GRIC Alliance member information and talk to the ISP's technical support during normal, local business hours. If you need further assistance, call our support line 24/7: +47 88009666

## How does GRICtraveler work with VPN?

GRICtraveler supports leading VPN solutions to create a secured VPN tunnel between your computer and the corporate network. GRICdial can automatically launch a VPN client once a successful Internet connection has been established.

With GRICtraveler you can connect anywhere in the world easily, quickly, and cost effectively while maintaining secure remote access to the corporate Intranet using GRICtraveler.

Multiple Internet Services. One Global Solution.
